

\$ solc

solc, the Solidity commandline compiler.

This program comes with ABSOLUTELY NO WARRANTY. This is free software, and you are welcome to redistribute it under certain conditions. See 'solc --license' for details.

Usage: solc [options] [input_file...]

Compiles the given Solidity input files (or the standard input if none given or "-" is used as a file name) and outputs the components specified in the options at standard output or in files in the output directory, if specified.

Imports are automatically read from the filesystem, but it is also possible to remap paths using the context:prefix=path syntax.

Example:

```
solc --bin -o /tmp/solcoutput dapp-bin=/usr/local/lib/dapp-bin contract.sol
```

General Information:

--help	Show help message and exit.
--version	Show version and exit.
--license	Show licensing information and exit.
--input-file arg	input file

Input Options:
